Regarding your recent request for a Material Safety Data Sheet (MSDS), this is to inform you that an MSDS is not required for Intertape PH-8 'Lint Tape' as specified in your request.

IPG has determined that the product as it is currently manufactured is, by definition, an article and is not hazardous or toxic under conditions of normal use. As defined under the OSHA Hazard Communication Standards, "article" means a manufactured item (i) which is formed to specific shape or design during manufacture; (ii) which has end use function(s) dependent in whole or in part upon its shape or design during end use; and (iii) which does not release, or otherwise result in exposure to a hazardous chemical under normal use.

Based on IPG's interpretation that the product in question is an "article" and does not involve any exposure to chemicals under normal use, no MSDS is required. If, at any time, IPG determines that the product is a "chemical" and does release or otherwise result in exposure to a hazardous chemical under normal use, then those customers using the product will be notified and sent an appropriate MSDS. Also, at that time, the product label would be modified in order to reflect such a change.

Please feel free to contact me if you have any questions regarding the classification of IPG products or this letter.

Sincerely,

Chris Graw
